

CPD Learning objectives:

- Increase awareness of the “real story” of the polio incident so that doctors have a key starting point for conversations with patients and their families, to communities and to colleagues.
- Explain exactly what the Jewish linkage is to the current incident– not only because cases might arise, but also to combat misinformation.
- Update about polio as an infectious disease, about the virus itself; and about what wastewater analysis is and what it teaches us.
- Provide an overview of the response programme, including the role of general practice, and about how communities can become better engaged in vaccination strategies
